Open Regulatory Compliance: Progress, Priorities and What's Next

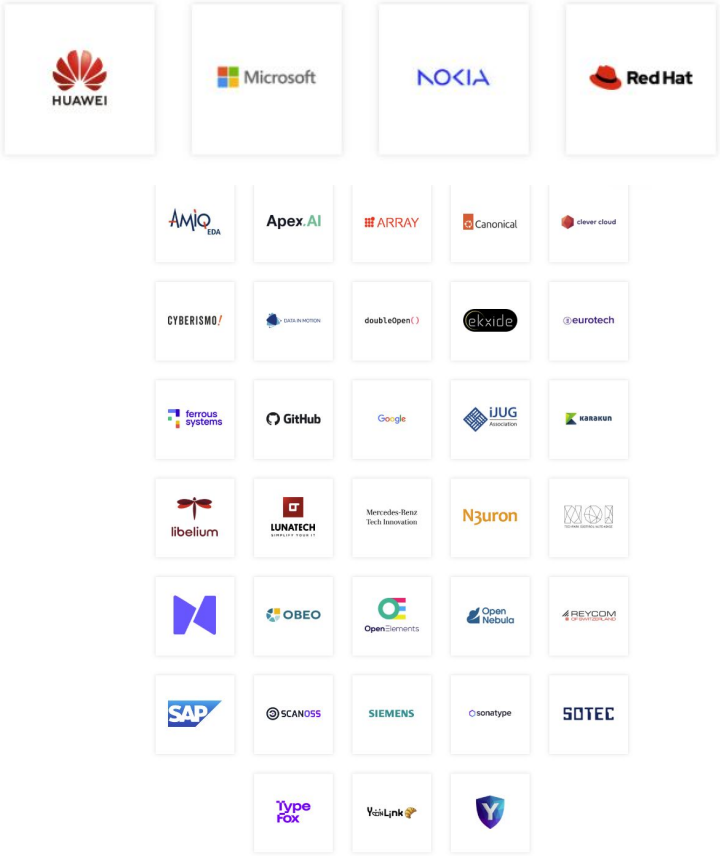

Juan Rico, Director of Program Management, Eclipse Foundation

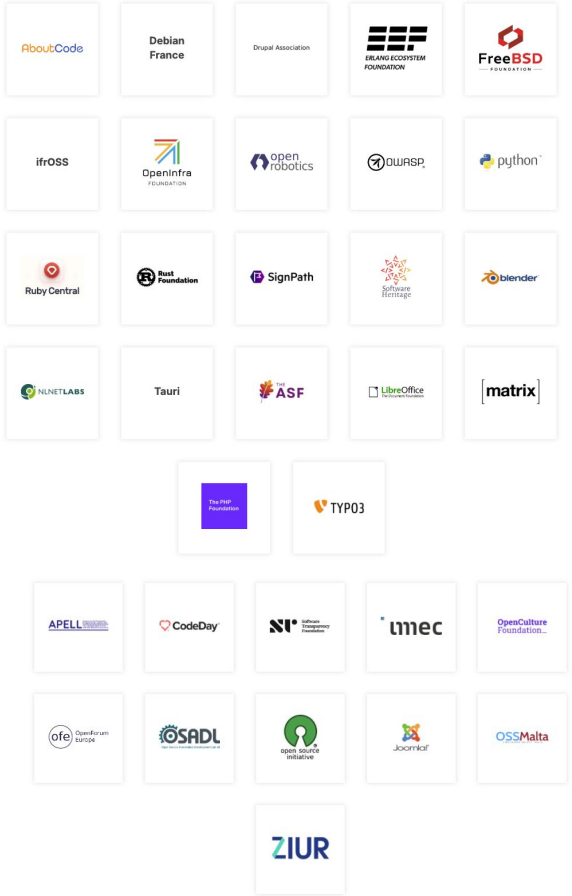

One step at a time

We found out how to navigate these waters, but there are still plenty of challenges ahead of us
Communicate, communicate and communicate
Open

Key 2026 milestones

CRA Implementation Guidance

- Strong commitment from the community when opened to everyone.
- Same commitment during restricted document topics.

Specific CRA Assets

- Stewards Whitepaper
- FAQ Website
- Attestations
- Due diligence
- ORC Learning Hub

AI SIG Launching

Initiating dedicated AI Special Interest Group to drive future compliance standards.

Calls for Feedback

- Deep community engagement in feedback activities.
- Scope expanding beyond CRA.
- Supporting EC and ENISA playbook feedback.

CRA related assets

Close the knowledge gap — a key priority for the working group during a very active year with guidance across multiple areas.

CRA FAQ Resource

Key central resource to integrate knowledge and facilitate catching up.

Stewards Whitepaper

Detailed guidance on learning how the Open Source Software Steward role can be implemented.

Attestations

Community Involvement
Active engagement and feedback from open source contributors and maintainers.

Industry Cooperation
Partnership between commercial adopters, security providers, and stewards.

Technical Feasibility
Realistic vulnerability management and security attestation practices.

Survey Report & Insights

ORC Learning Hub

Initially planned to close the gap between the legal text and the implementation reality.

Clarification.

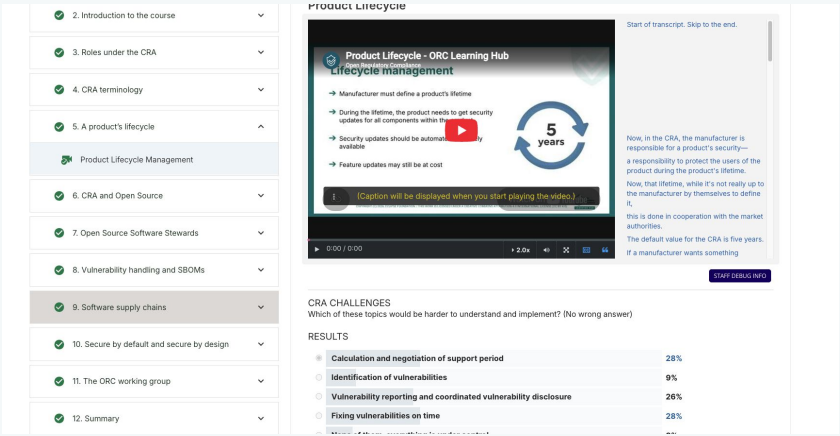

Clear explanation of regulatory standards and requirements for open source.

Support to the implementation.

Actionable resources and modules to guide practical deployment.

Open Regulatory Compliance

LEARNING HUB

CRA - AI Act interplay

Digital Elements

AI Systems are products with digital elements

Open Source Regime

Both legislations cover open source software special regime

Ecosystem Driver

In both cases ecosystem remains as a key driver for achieving compliance

Cyber Resilience Act (CRA)

CRA → Ecosystem & Governance Model

The Definitional Focus

CRA defines FOSS (Recital 18) not just by licensing, but through its open, collaborative development and distribution model.

Governance Recognition (Article 24)

Explicitly establishes the legal category of the "Open Source Software Steward" to cover foundations and non-profit entities facilitating development.

Scope: Licensing + Development Method

EU AI Act

AI Act → Artifact & License Centric

The Definitional Focus

AI Act (Recital 102) approaches FOSS primarily through the specific licensing permissions of the model artifact itself.

Governance & Distribution

Does not establish coordinate governance structures for non-commercial project support; instead, focuses strictly on commercializing obligations.

Scope: Artifact Licensing Conditions Only

AI Policy and Compliance

1. Inform

Community Guidance

Scope: Translate regulatory obligations into practical developer resources.

Primary Focus: EU AI Act compliance, model provenance, transparency, and data documentation.

Deliverables: Implementation FAQs, compliance playbooks, and educational briefings.

2. Influence

Standards Representation

Scope: Direct engagement with regulatory authorities and standards bodies

Primary Focus: Ensuring emerging technical standards remain workable for open source models and tooling.

Deliverables: Joint consultation responses, policy whitepapers, and standard-setting representation.

3. Align

Cross-Regulatory Harmonization

Scope: Coordinate across overlapping international regulatory frameworks.

Primary Focus: Intersection between Cyber Resilience Act (CRA) and AI governance (CADA, U.S. state AI acts).

Deliverables: Joint initiatives with Cyber Resilience SIG and unified compliance roadmaps.

Contribution to consultations

14 Consultations

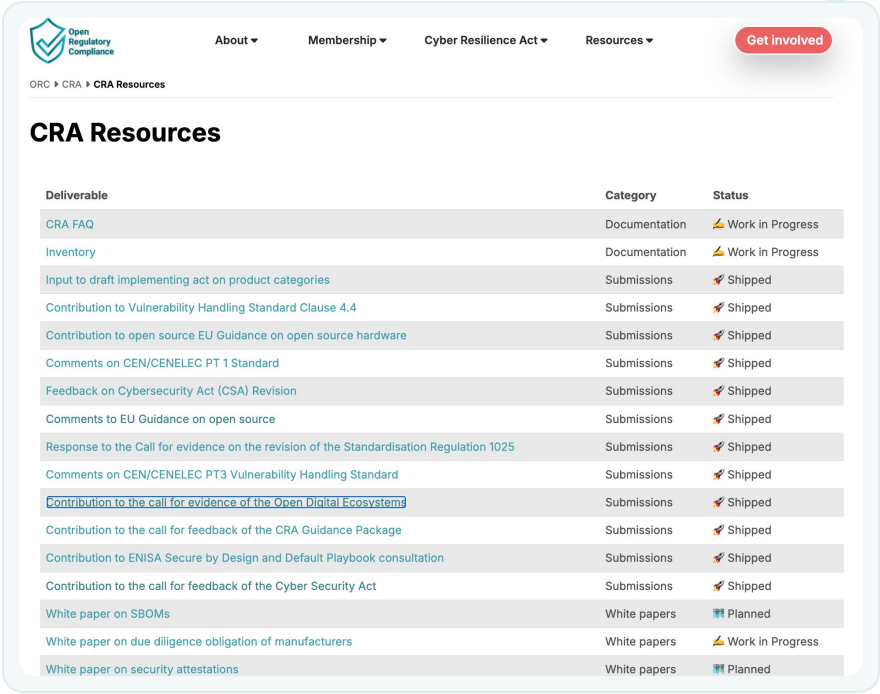

Inputs emerged entirely as a unified community effort.

Diverse community with solid governance

Unique community diversity, actively represented in the steering committee.

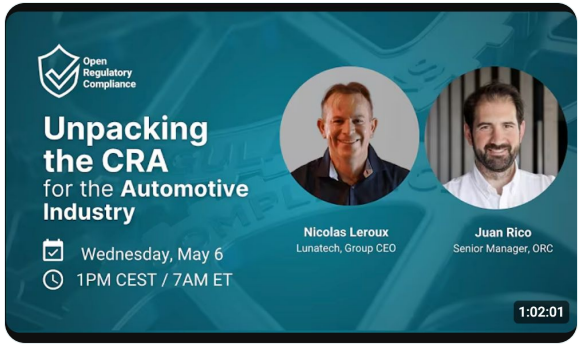

Full Consensus

No votes cast against any proposed text across all submissions.

Support to industry

Ecosystem Goal

Foster a more robust, compliant, and sustainable software development ecosystem around open source.

Commercial Use

Make open source suitable for commercial adoption and encourage users to contribute back.

Stakeholders

Focus on WG members while actively engaging multiple industry stakeholders.

Industry Focus

Started with Automotive, with Industrial Automation and IoT actively following.

What's next

AI Act

Implementation of the AI act for open source

Cybersecurity Act

Cybersecurity Act and the role of open source software stewards

Due Diligence

Due diligence in reality

Tech Sovereignty

Tech sovereign package with its open source strategy

Cloud & AI Act

Cloud and AI development Act

Our objective is not only to contribute to policy, but **actively engage in the implementation.**

Addressing Regulatory Challenges Together

Connecting Policy & Practice

Bridging the gap between complex regulatory frameworks and real-world open source development practices through proactive engagement.

A Neutral, Built-for-Purpose Home

Our community provides the established governance, trust, and collaborative infrastructure required to tackle industry-wide compliance goals.

Shared Responsibility

Success is directly tied to active community participation—defining standards, sharing expertise, and shaping implementation together.

Join our community to shape effective compliance strategies and drive collective action.
