Red Hat role in CRA

Red Hat as a Manufacturer

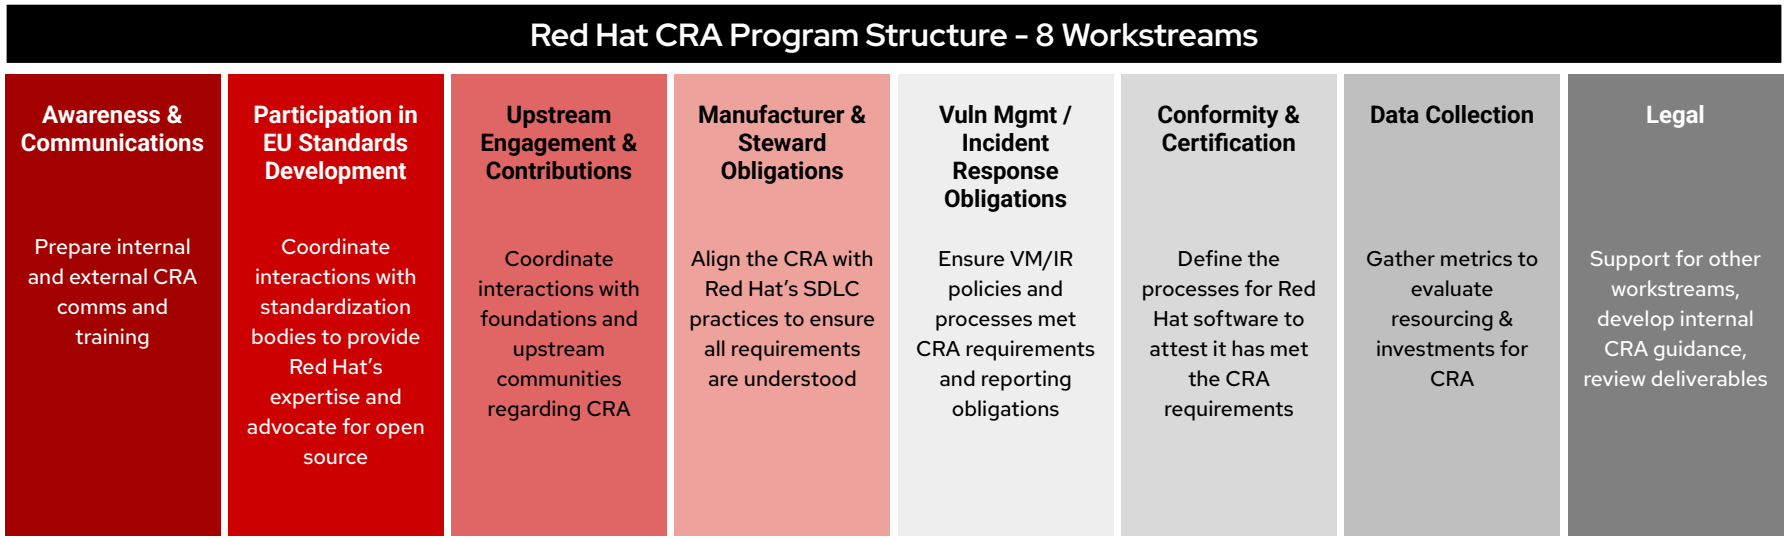

- Provider of enterprise open-source software solutions for the global market, including the EU.

Red Hat as a potential Open Source Software Steward

- Red Hat's relationship with open source software is foundational. The company actively supports Fedora and countless others projects.

Red Hatters are Contributors and Maintainers

- Thousands of Red Hatters contribute to open source projects everyday.

15 Projects are stewarded by Red Hat

containers

Red Hat stewardship approach

Red Hat stewardship guidelines developed based on stewardship criteria

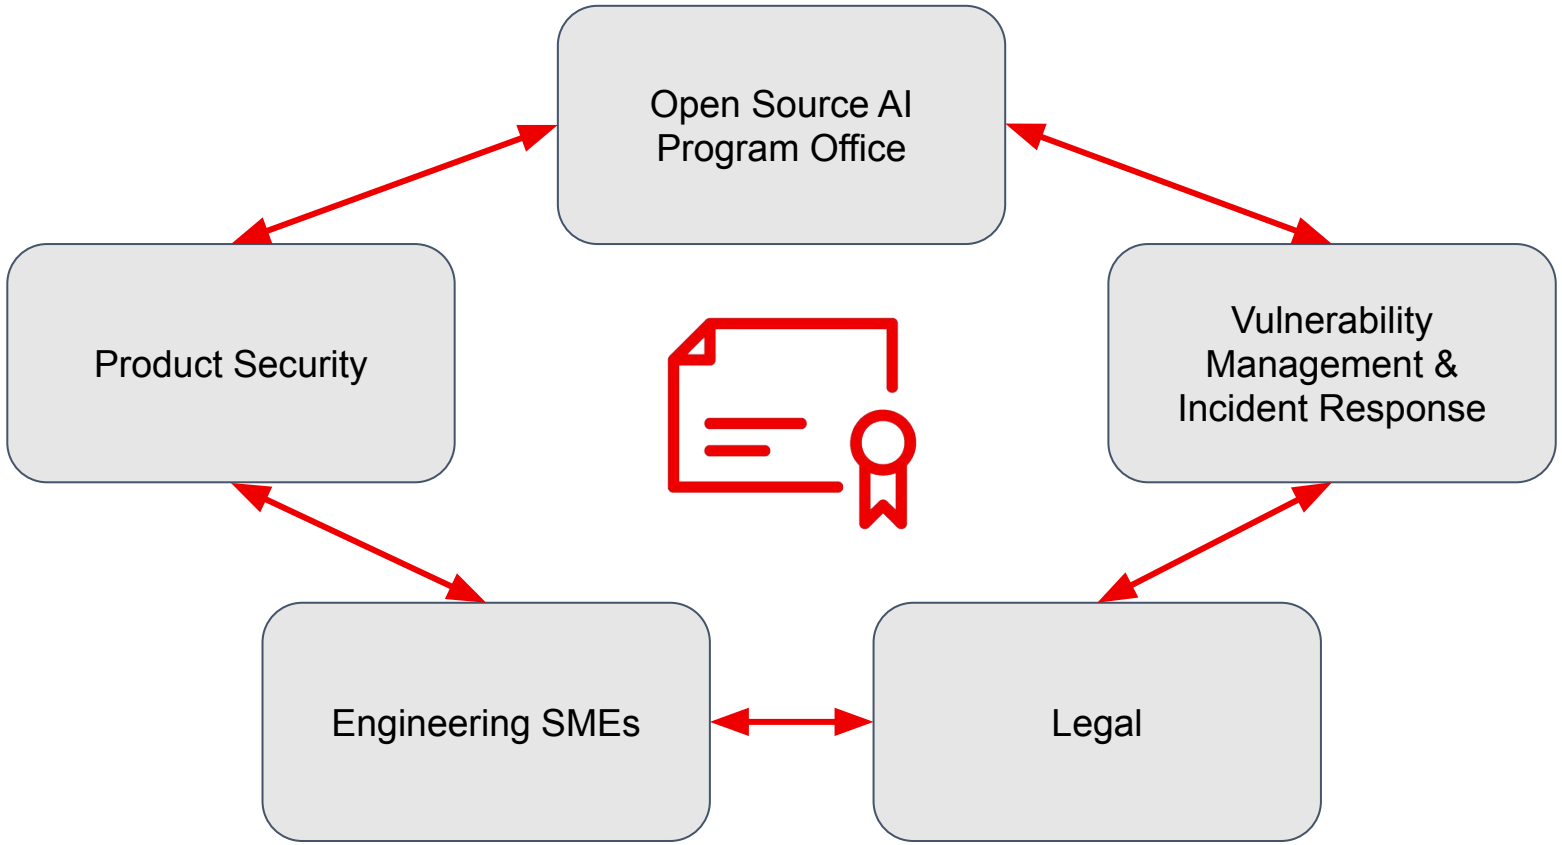

- Onboard open source project and share the idea of stewardship - no push
- Why is selected open source project important for Red Hat
- Two categories of stewardship selected -> “Light” and “Champion”
- How governance is structured for selected open source projects

Share benefits for open source projects

- We want to share benefits regarding security posture improvements for upstream projects using stewards tools and investments

Red Hat stewardship approach

Strong team cooperation in framework creation

How to influence stewarded projects?

Connection between open source project and steward

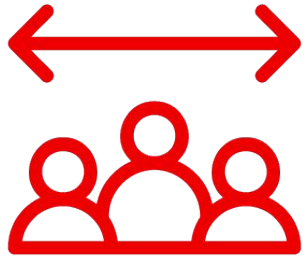

- Familiarize open source project with the concept and share the idea of stewardship - no push

Make sure that general situation is understood

- “Community does not owe you anything” - cooperation has to be about mutual respect and understanding benefits for both sides

Security is currently hot topic and we are here to help open source projects

- Use our tools and processes, tailor them and guide open source projects through this opportunity is the key how to get project onboard

What we learned so far?

One size does not fit all

- Some bigger projects are slow in pushing information through
- Smaller projects are keen to be more secure, but struggle with capacity
- Governance is usually something where projects use our help and assistance
- We need to tailor our communications as much as possible

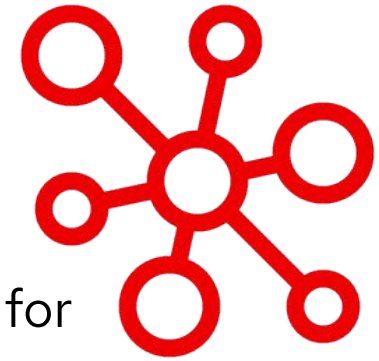

Our framework is complex, but for certain projects seems complicated

- We wanted to capture situation in a complex way, but smaller projects which don't have dedicated people to security feel overwhelmed by the amount of information

It is very beneficial to have some security advocate within open source project

- Security SMEs within projects are great benefit for steward cooperation

What are the next steps?

Simplicity is the key

- Preparation of checklist for open source projects which will make life easier for smaller projects
- Templates for security policy and other requirements which are as simple as possible and open source projects can use them

Continuous stewardship guidelines refinement

- Red Hat stewardship guidelines
- Share further understanding that steward is here to help open source project during the lifecycle and doesn't do just “compliance exercise”

Q&A

Red Hat

Thank you

Red Hat is the world's leading provider of enterprise open source software solutions. Award-winning support, training, and consulting services make Red Hat a trusted adviser to the Fortune 500.
